

Specialty pharmacy drug list

January 1, 2018

BriovaRx[®], the OptumRx[®] specialty pharmacy, provides comprehensive support services, including access to pharmacists around the clock, for high-cost oral and injectable medications used to treat rare and complex conditions. In addition, your medications will be shipped to you at no extra cost.

Characteristics of specialty medications

“Specialty” medications are defined as high-cost oral or injectable medications used to treat rare and complex conditions. These are highly complex medications, typically biology-based, that structurally mimic compounds found within the body. Medications must have at least one of the following characteristics in order to be classified as a specialty medication by BrivoRx:

High cost

- Typically priced at more than \$1,000 per 30-day supply.

High complexity

- Biotechnology products[†]
- Medications that treat ultra rare conditions
- Medications that are included in a specialty therapeutic drug class strategy

High-touch medications that require:

- Temperature control or other special handling and shipping requirements (e.g., refrigerated or frozen shipping)
- Ongoing management by a pharmacist and/or physician specializing in treating the condition
- Focused, in-depth education including how to administer injections, adhere to the treatment protocol, and manage side effects

[†] Protein or protein-based molecular entities
