

Emergency Notification Checklist for Government Buildings

Government agencies face a unique set of challenges when it comes to emergency notifications. Whether it's the threats buildings come under or simply communicating information, government agencies need to share information quickly during a crisis.

This checklist will help you determine if your government agency has the means to reach everyone in your building during any emergency that may arise.

Do you have the ability to ...	Yes	No
Notify everyone during an emergency?		
Reach people on multiple devices, including:		
a. overhead paging?		
b. mobile devices?		
c. desktop computers?		
d. landline phones?		
e. digital signage?		
Send notifications in multiple formats, including:		
a. phone calls		
b. SMS text messages		
c. push notifications		
d. email		
Monitor and trigger alerts for severe weather?		
Gather key personnel instantly via a conference call?		
Communicate building evacuation information quickly?		
Designate recipient groups to receive certain notifications?		
Receive alerts when 911 is called?		
Record 911 calls from your building?		
Send notifications with the push of the button?		
Integrate notification systems with the Internet of Things?		
Conduct live, ad hoc or pre-recorded pages?		
Easily lockdown your building when there is a threat?		

InformaCast gives users the ability to do all of these things and more. If you answered “No” to any of these items and would like to learn more about how to provide complete reach when sending notifications to government personnel, visit www.singlewire.com/solutions-government
